

## STUN-CUFF POSITIONING

**When using the STUN-CUFF prisoner control device on the leg. It should be placed over the sock toward the outside Achilles Tendon region of the ankle, with the electrical points on the upward side away from the foot. See photograph below. The strap should be firm but not overly tight. This allows the electricity to dance on the skin for best effect.**

**When using the STUN-CUFF prisoner control device on the wrist. It should be placed over a shirt sleeve (best effect) or directly to the skin. Place the STUN-CUFF on the inside of the forearm, with the electrical points away from the palm See photograph below. The strap should be firm but not overly tight. This allows the electricity to dance on the skin for best effect.**

**Remember when firing the STUN-CUFF prisoner control device on a person, that everyone has a different level of tolerance. The STUN-CUFF gives a first burst of electricity for 2-3 seconds, some people may require more, by holding the Fire button down you can Fire as long as needed for compliance. The longer the Fire button is pressed, the more intense it becomes. The STUN-CUFF has up to 10 minutes of Fire power and an approximate range of 100 yards.**

**By following these simple techniques the STUN-CUFF is a very effective tool against unruly prisoners.**
